

'grep' to match lines

<code>grep "pattern" file</code>	Searches "pattern" in "file"
<code>grep -v "garbage" file</code>	Only print lines without "garbage"
<code>grep -i "pattern" file</code>	Ignores the case
<code>grep "[abc]" file</code>	Lines which have an "a", "b" or "c"
<code>grep "[1-5]" file</code>	Lines which have numbers from 1 to 5
<code>grep "^ [0-9]" file</code>	Lines which start with a number
<code>grep "\.\$" file</code>	Lines which end with a dot

'awk' to work with columns

<code>awk '{print \$1,\$2}' file</code>	Prints the 1st and 2nd columns of the file
<code>awk '\$3 > 500 {print \$1}' file</code>	Prints the 1st col only if 3rd is over 500
<code>awk 'seen[\$0]++ == 1 {print \$1}' file</code>	Prints 1st column of duplicate lines

'sed' to substitute text

<code>sed "s/old/new/g" file</code>	Changes all occurrences of "old" to "new"
<code>sed "1,2s/old/new/g" file</code>	Only for the first two lines
<code>sed -i "s/old/new/g" file</code>	Overwrites the file contents

other tools

<code>sort -g file</code>	Sorts all lines, with numerical preference
<code>wc file</code>	Counts the words, lines and chars of a file
<code>head -n 1 file</code>	Shows only the first line of a file
<code>tail -f logfile</code>	Shows the last lines plus any new lines
<code>gnuplot <<< 'set term png; set output "file.png"; plot "1.txt" w lines lw 2 notitle'</code>	
<code>perl -e "print uc \$i"</code>	Run a one-line Perl command
<code>seq -s ", " -w 0 3 20</code>	Numbers from 0 to 20, step 3, zero-padded
<code>cut -c 12-13 file</code>	Get chars 12 and 13 in each line
<code>paste file_column1 file_column2</code>	Append, line by line, in a single line

bash scripts

<code>name="Pepe"; echo \$name</code>	Declares a variable and prints it
<code>four=\$((2+2))</code>	Evaluates an expression
<code>first_line=`head -n 1 file`</code>	Assigns the output of a command
<code>if ["\$a" == "\$b"]; then A; else B; fi</code>	Conditional expression
<code>for i in *; do mv \$i \$i.old; done</code>	Iterate on all files
<code>for i in newdir{0..9}; do mkdir \$i; done</code>	Iterate on a new list of elements
<code>nohup wget http://ubuntu.com/cd.iso &</code>	Detach and run in background
<code>cat <<< "Hello" >> output.txt</code>	Fakes an input file, appends it to the output
